🔗 <https://nathanielfaborada.github.io>

I am an aspiring junior software developer who builds clean and responsive applications using modern tools and AI. I have experience creating REST APIs and full-stack projects with React and Node.js. I am also interested in automation and improving system performance.

SKILLS

Programming: JavaScript, Python, C++, and PHP

Frontend: React, FlutterFlow, Html, CSS

Backend: Node.js, RESTful APIs

Database: MySQL, PostgreSQL, Supabase

Version Control: Git, GitHub

Tools & Technologies: Docker, Virtual Machines

AI Tools: Codex, ChatGPT, Claude, Cursor

EDUCATION

Bachelor of Science in Computer Science

College of Mary Immaculate, Poblacion, Pandi, Bulacan

2022 – 2026

WORK EXPERIENCE

Intern Software Developer

Kamada Web Logistics

JCAS Logistics | April 2025 – May 2025

- Cleaned and normalized employee records to ensure data consistency and accuracy.
- Imported and managed normalized employee data in Supabase databases.
- Created Human Resources UI mockups using Balsamiq.
- Converted UI mockups into frontend components using FlutterFlow.
- Built HR system interfaces including Employee Management, Attendance and Timekeeping, Payroll Management, Advances History, and Remittances using FlutterFlow.
- Implemented functionality and user interactions for Human Resources modules using FlutterFlow.
- Participated in daily stand-up meetings to report development progress and blockers.

Tech Stack: FlutterFlow, Supabase, Balsamiq

Drivers Companion App

JCAS Logistics | April 2025 - May 2025

- Created Drivers Companion UI mockups using Balsamiq.
- Converted UI mockups into frontend components using FlutterFlow.
- Implemented functionality and user interactions for the Drivers Companion App.
- Developed functionality to reflect assigned bookings from the Booking Dashboard to the Drivers Companion App.

Tech Stack: FlutterFlow, Supabase, Balsamiq

Freelance Software Developer

Kamada Web Logistics

JCAS Logistics | June 2025 – September 2025

- Continued backend integration and functionality implementation for Human Resources modules using Supabase and FlutterFlow.
- Implemented functionality and backend integration for Operation Module features including Booking Dashboard and Operation Dashboard.
- Assisted in implementing functionality and backend integration for Accounting Management modules including Payroll and Remittances

Tech Stack: FlutterFlow, Supabase, Balsamiq

PROJECT EXPERIENCE

Immaculearn – Collaborative Learning System

Role: Full-Stack Developer and Project Architect
College Thesis Capstone
JavaScript, Node.js, Express.js, MySQL | College of Mary Immaculate
September 2024 – March 2026

A collaborative learning platform that enables professors to manage course spaces, assignments, submissions, and student interactions in real time.

Full-Stack Development

- Designed and developed the Terms and Conditions and Privacy Policy interfaces.
- Developed Admin, Student, and Teacher dashboards with role-specific functionalities.
- Implemented dashboard features allowing students and teachers to add and delete records dynamically.
- Created an Admin Dashboard with statistics and monitoring interfaces for system management.
- Developed REST APIs for sending automated invitation emails to student and teacher accounts for system registration.
- Integrated Brevo email API to automate invitation-based account onboarding and sign-up workflows.
- Implemented role-based announcement filtering to ensure announcements are visible only to their intended student and teacher audiences.
- Developed dynamic search and filtering features for student and teacher records across the database.
- Implemented admin login and authentication functionality with secure credential validation.

System Analysis & Documentation

- Developed Level 0–2 Data Flow Diagrams (DFD) for system workflow and process analysis.

RELEVANT PROJECTS

Weather Website

Tech Stack: HTML, CSS, JavaScript, REST APIs.

- Developed a responsive weather application using external weather APIs.
- Implemented dynamic weather forecasting and real-time data rendering.

New York Times App Clone

Tech Stack: HTML, CSS, JavaScript, REST APIs.

- Developed a responsive news application inspired by the New York Times interface.
- Implemented article rendering and responsive frontend layouts using JavaScript.

AI-Driven Content Automation

Tech Stack: Node.js, JavaScript, Gemini API, Facebook Graph API, Axios, Node Schedule, REST APIs.

- Developed an AI-powered content automation tool using Node.js and Gemini API.
- Automated Facebook page posting with scheduled AI-generated captions and hero images.
- Integrated external APIs to fetch Mobile Legends hero data and images dynamically.
- Used environment variables to securely manage API keys and access tokens.
